Summary

Data analyst experienced building **trustworthy reporting and data products across recruiting, workforce programs, and operational systems**. Skilled in **SQL, Python, and Tableau**, with hands-on experience defining metrics, validating data across systems, diagnosing upstream data-quality issues, and translating complex analysis into decisions for non-technical stakeholders.

Education

University of California San Diego Sep 2022 – Jun 2026
B.S. in Data Science & B.S. in Cognitive Science – Design and Interaction
GPA 3.90 / 4.00 | Cum Laude | Provost Honors (12 Quarters) | Ernest C. Mort Leadership Excellence Award

Coursework: Systems for Scalable Analytics, Statistical Methods & Experiment Design, Machine Learning, Data Visualization

Technical Skills

Data & Querying: SQL (CTEs, joins, window functions), Snowflake, Python (pandas, NumPy, scikit-learn), R
People & Product Analytics: Recruiting funnel analysis, KPI & metric definition, program evaluation, root-cause analysis
Reporting & Data Quality: Tableau, Power BI, Looker, Salesforce, ETL pipelines, dashboard development
Engineering & Workflow: Git/GitHub, workflow automation, reproducible analytics, technical documentation, Excel

Experience

Associate Quantitative Analyst Sep 2026 – Present
Pacific Gas and Electric Company
- Support forecasting of **behind-the-meter battery storage adoption** for system planning, translating a highly manual Excel-based forecasting process into **automated, reproducible Python workflows**

Data Analyst Intern Sep 2025 – Sep 2026
Genesys Works
- Owned analytics for the **recruiting and program funnel across 1.9K+ candidate interviews**, writing **SQL in Snowflake** to analyze conversion, admission, and completion patterns
- Rebuilt a reported outcome metric independently in **SQL after it failed to reconcile**, identifying **CRM logic that diverged from its documented definition** and partnering with the Salesforce owner to correct the upstream logic
- Modeled **National Student Clearinghouse** data into new derived **Snowflake fields** and built **Tableau reporting** giving program teams a self-service view of enrollment and persistence outcomes
- Built a Python **entity-resolution pipeline** linking 200+ records across internal and external systems at **95% accuracy**, replacing manual review while improving consistency of downstream analysis

Operations Data Analyst Intern Jun 2025 – Aug 2025
Pacific Gas and Electric Company
- Analyzed **170K+ hours of operational data across 13 sites**, identifying anomalies and upstream data inconsistencies that affected performance reporting and operational decision-making
- Partnered with engineering and operations stakeholders to translate ambiguous questions into analytical requirements and shipped **Power BI dashboards** used for ongoing performance monitoring
- Built reusable **Python automation workflows** to standardize vendor-data ingestion and recurring reporting, improving reproducibility and enabling teams to refresh analyses without analyst support

Product Analyst Intern Mar 2025 – Jun 2025
Plants Without Borders
- Designed an **ETL pipeline** standardizing weekly product and pricing data from disparate upstream sources into analysis-ready tables for trend analysis and demand forecasting
- Built a **self-service Looker dashboard** giving non-technical stakeholders real-time visibility into pricing and product trends for inventory and market-positioning decisions

Projects

Multi-Agent AI System for Content Credibility Detection | GitHub Mar 2026
- Led a **3-person team** building an automated **content-review pipeline** (ML + LLM agents) scoring content across **6 defined signal dimensions**, turning a subjective judgment into an **auditable rubric** with **90% peak accuracy**
- Ran **controlled validation testing** on competing designs and found the **more complex approach underperformed the simpler one**; shipped the evidence-backed version and **documented the evaluation logic** for reuse

Statistical Analysis of 230K+ Records & 730K+ Ratings | GitHub Mar 2024
- Ran **permutation-based hypothesis tests** isolating a **significant effect ($p = 0.002$) independent of confounds**, then translated the result into plain-language visuals for non-technical readers
- Trained a **Random Forest classifier**, lifting **F1 from 0.87 to 0.92** through feature engineering and tuning while weighing precision-recall tradeoffs on a skewed class distribution
